Document type: Part 2 Website changes

Purpose of CSS Changes

This document outlines all the CSS modifications made to improve the visual design, layout, and responsiveness of the website. These changes enhance user experience, accessibility, and consistency across devices.

Notes

- All changes are made in CSS/style.css.
- Version control is recommended for tracking future updates.
- Consider using CSS variables for theme consistency.

2. Global CSS changes (Applicable to all 5 pages)

This section details the changes made to elements that appear consistently across all webpages.

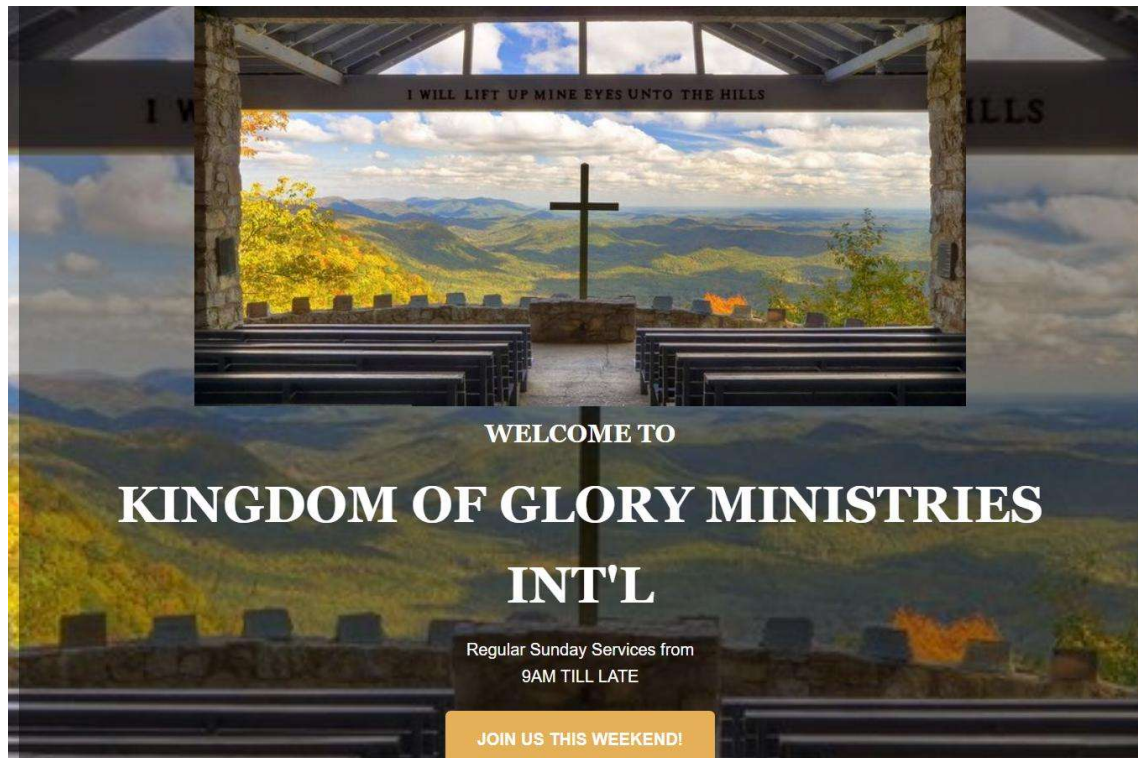

- a) Typography and Font Updates
 - Change: replaced the default font stack with Open Sans for better readability
- b) Navigation bar redesign
 - Change: implemented a new sticky navigation bar with a solid background and hover effect

3. Page-Specific CSS changes

This section details the styling applied to specific pages only.

a) Homepage – Hero section

- Make the main call-to-action button more prominent.

(sample header for introduction to the website)

b) About page

- This is to show how and what the church is about with images that show the different people involved.

c) Gallery page

- Displays images in a lightbox manner, which allows the images to hover before being clicked on, although the lightbox effect will be implemented when JavaScript is added. More images were added to enhance the gallery's aesthetic appeal.

d) Foundation page

- There is a donation section that allows users to donate, although actions to donate have not been made, as JavaScript has not yet been implemented. More images were added to show what the foundation page is about.

Enter account number

Show Banking Details

(sample donation form)

e) Contact page

- There are two slots where feedback can be implemented, one is more freelanced, whereas the other is more detailed. The overall structure and colours were changed as well to make the contact page look more accessible and pleasing to look at. The Google map was also enlarged to make it easy and pleasing to look at.

(sample feedback survey)

f) Other CSS changes

- The navigation bar has changed, and it also allows for different mobile intakes, either cell phone use or computer/laptop use.
- On the header, there was also an addition of the church contact details along with the images of email and telephone.
- As for the footer, it stayed the same.

(navigation bar)

4. Conclusion and Remaining Issues

- Summary: The overall aesthetic has been unified across all 5 pages, providing a professional and consistent user experience.
- Outstanding: the lightbox needs to be improved to allow the users to be able to click on the image and view it in full or large. The feedback/survey sections still require user input values to allow users to enter their information, and the form will not submit unless all input values are completed.
